¹ The information published in this report is consistent with the information published in the Annual Report 2020 of Zurich Life Insurance Company Ltd, as well as the regulatory reporting of the Zurich Life Insurance Company Ltd for the year 2020, including the regulatory reporting to the Swiss Financial Market Supervisory Authority FINMA (FINMA) on the Swiss Solvency Test, in accordance with art. 25 ISA and art. 53 ISO. While the financial statements and the information therein were subject to audit by the statutory auditor of Zurich Life Insurance Company Ltd, PricewaterhouseCoopers AG (see Appendix 2), there was no external audit or review of this report. Please further note that, while this report has been filed with FINMA, FINMA has not reviewed the report. The SST calculation for the year ended December 31, 2020 has been filed with FINMA in the 2020 SST reporting in April 2021. In line with the normal timeline for FINMA reporting, the ZLIC 2020 SST reporting remains subject to regulatory review.

All amounts are shown in Swiss francs and rounded to the nearest million unless otherwise stated, with the consequence that the rounded amounts may not add up to the rounded total in all cases. All ratios and variances are calculated using the underlying amounts rather than the rounded amounts.

Overview

Business profile

Zurich Life Insurance Company Ltd (ZLIC), a life insurance company domiciled in Zurich, Switzerland, is operating primarily in Switzerland and through its main branches in Japan, Hong Kong and Dubai. ZLIC is 100-percent owned by Zurich Insurance Company Ltd (ZIC), which in turn is fully owned by Zurich Insurance Group Ltd (ZIG).

Gross written premiums (GWP) and policy fees

CHF 1.9 billion

Operating result

CHF 126 million

Total investments

CHF 18.7 billion

System of governance

ZLIC has a strong corporate governance framework that is implemented in its daily business, which provides the basis for ZLIC to create sustainable value for all of its stakeholders.

Our enterprise risk management framework (ERM) supports achievement of ZLIC's strategy and helps protect our policyholder, capital, liquidity, earnings and reputation.

Risk profile

Taking risk is inherent to the insurance business, but such risk-taking needs to be done in an informed and disciplined way, and within a pre-determined risk appetite and tolerance. This is the primary objective of Zurich's risk management.

ZLIC uses its Total Risk Profiling™ process to monitor both external and internal risks to our strategy and financial plan. Among the key risks we identified in 2020 were uncertainties related to asset market volatility and investment returns, reserve adequacy Life, data protection and security. These risks are affected by COVID-19, but impacts are not leading to either a significantly higher probability or severity. The significant risks for ZLIC, as measured by Swiss Solvency Test economic capital metrics, are: market, insurance and credit risk.

Introduction

Introduction

The Zurich Life Insurance Company Ltd (ZLIC) financial condition report is prepared in compliance with Art. 26 Swiss Insurance Supervision Act (ISA) and FINMA's Circular 2016/2 'Disclosure - insurers' and is not audited. The report focuses on the 2020 financial year, and should be read in conjunction with the audited ZLIC's annual report 2020 (available on: <http://www.zurich.com/en/investor-relations/results-and-reports/other-statutory-filings>). Wherever applicable, this report makes reference to the Zurich Insurance Group's Financial Condition Report or the Zurich Insurance Group's Annual Report; refer to these reports for more information.

ZLIC is part of the Zurich Insurance Group, which maintains a strong capital position. As of December 31, 2020, the Insurer Financial Strength Rating (IFSR) of ZIC was rated 'AA-/Positive' by Standard and Poor's¹, 'Aa3/ Stable' by Moody's and 'A+(Superior)/Stable' by A.M. Best. Furthermore, Zurich Insurance Group's unaudited estimated SST ratio was 182 percent as of January 1, 2021.

The ZLIC Financial Condition Report (FCR) is a standalone report reflecting the actual situation of ZLIC. The results thereof will be consolidated into the Zurich Insurance Group Financial Condition Report.

1. Executive summary

The Financial Condition Report was produced in accordance with FINMA Circular 2016/2 Public Disclosure for Insurers: Fundamental principles in reporting the financial position. The management summary provides general insights and focuses on important developments in 2020, but also gives background information and explanations where necessary.

Business activities

ZLIC serves two main customer segments (individual life insurance called 'Retail', and Corporate Life & Pensions) operating primarily in Switzerland and its branch in Japan. Hong Kong and UAE are branches in run-off.

Performance

ZLIC reported a net income after taxes of CHF 126 million in 2020, which is a decrease of 52 percent compared to the prior year's result of CHF 263 million. Key drivers were less technical income and investment income compared to prior year, partially offset by positive reserve movement. ZLIC maintained a strong capital position with a total shareholders' equity of CHF 1,399 million and CHF 1,535 million as of December, 31, 2020 and 2019, respectively.

Gross written premiums and policy fees decreased by 7 percent to CHF 1,861 million compared to 2019. Key drivers were less new business written in Switzerland, despite continuous growth of the business in Japan. Investment income decreased by CHF 63 million or 7 percent to CHF 839 million in 2020 from CHF 902 million in 2019. Main drivers were less realization of capital gains on real estate (21 objects sold in 2020 compared to 38 in 2019) and less write-ups on equity and debt securities due to the challenging market environment.

Corporate governance & risk management

Several governance bodies exist in ZLIC with the aim of ensuring adequate oversight of ZLIC. In line with legal and regulatory requirements, ZLIC has a Board of Directors (Board), an Audit & Risk Committee (ARC) at Board level, and a Management Board. These bodies meet regularly (at least four times per year) to ensure appropriate oversight and control (including activities on branch/business and subsidiary level). There are also quarterly branch/business oversight meetings to support the oversight and control process on a Board and Management Board level.

ZLIC has established a 'three lines of defense' approach, aimed at clearly identifying, assessing, owning, and managing risks.

- As the first line of defense, business management engages in risk-taking through business activities and is responsible for day-to-day risk management.
- The risk management function (the second line of defense) oversees the overall risk management framework and supports manage risk. Issues, when they arise, based on their relevance, are escalated to the Management Board and the Board. ZLIC's risk appetite statement establishes risk limits. Compliance also acts as an independent second line of defense function. Compliance supports ZLIC in establishing and assessing principles, processes, and control structures that support adherence to legal, regulatory and internal requirements. For certain risks, Compliance provides specialized assistance to the risk owner(s) through risk-specific policies, risk evaluations, process and control analysis and advice, training and awareness, designing controls and monitoring operations.
- Internal audit (the third line of defense) provides independent assurance regarding the effectiveness of the ERM framework, risks and controls.

Other governance and advisory functions, such as legal and actuarial, help business management to manage and control specific types of risks.

¹ S&P upgraded the Group rating on March 15, 2021, to AA / Stable.

Introduction (continued)

An internal control system is in place to provide assurance around ZLIC's operations.

Risk profile and solvency

FINMA established the Swiss Solvency Test (SST) to quantitatively measure risk. ZLIC files the SST ratio annually with FINMA. ZLIC's largest risk is market risk, which constitutes approximately 45 percent of the total CHF 4.1 billion undiversified target capital. Credit migration and default risks contribute a further 12 percent. Morbidity is a further important risk for ZLIC in portfolios in Switzerland and Japan. All parts of ZLIC face expense risk, and there is also longevity risk related to Swiss annuities. Once a year, ZLIC's key risks including operational risks are also assessed in a Total Risk Profiling TM (TRP) analysis. Mitigation actions are defined and tracked, where necessary.

For reporting SST, assets and liabilities are valued on a market-consistent basis and are then stressed to calculate the risk-bearing capital in ZLIC's market-consistent balance sheet (MCBS). In 2020 the risk-bearing capital for ZLIC increased by CHF 0.3 billion compared to 2019.

ZLIC's capital management is mainly governed by SST, statutory equity and tied asset requirements, which ZLIC follows in accordance with FINMA guidelines and statutory law. For the tied assets coverage, reserves are calculated on a prudent, statutory basis.

The ZLIC SST ratio as of December 31, 2020 grew compared to December 31, 2019 to 223 percent. Despite a continued low-interest rate environment, ZLIC's capitalization remains strong as measured by SST. The SST ratio was again supported by strong value creation from new and in force business, more than offsetting the effect of the CHF 170 million dividend proposed.

The data, methods, and results of the Swiss Solvency Test for ZLIC are produced in accordance with the Insurance Supervision Ordinance (ISO, art. 41 seqq.). ZLIC's SST is calculated using the SST standard model.

COVID-19

Since the end of 2019, the COVID-19 pandemic has developed rapidly with far-reaching impacts across the insurance industry and the global economy overall. The global nature of the pandemic and the varying government actions taken to mitigate it make the potential losses (including the wide range of related coverage issues generated) inherently more difficult to model than loss events with a consequent increase in uncertainty around them. Management has considered the effect of COVID-19 to the extent possible in its estimates and assumptions.

Dividend

In 2020 ZLIC paid a dividend of CHF 263 million. This report reflects the dividend of CHF 170 million paid on April 21, 2021, as approved by the ZLIC Annual General Meeting that took place on April 9, 2021. According to the applicable SST valuation requirements, this dividend payment is already reflected in the SST solvency ratio as of December 31, 2020.

Outlook

The key priorities in 2021 will be on addressing customer needs by promoting a balanced product mix, further leveraging appropriate distribution channels, enhancing investments in essential infrastructure and establishing a strong customer service culture to allow ZLIC to deliver sustainable, profitable growth in a changing and more competitive business environment. ZLIC's management will continue to carefully monitor and act upon legal and regulatory requirements.

2. Approval of the Financial Condition Report

The 2020 ZLIC FCR was reviewed by the Management Board and then approved by the Board of Directors on April 19, 2021.

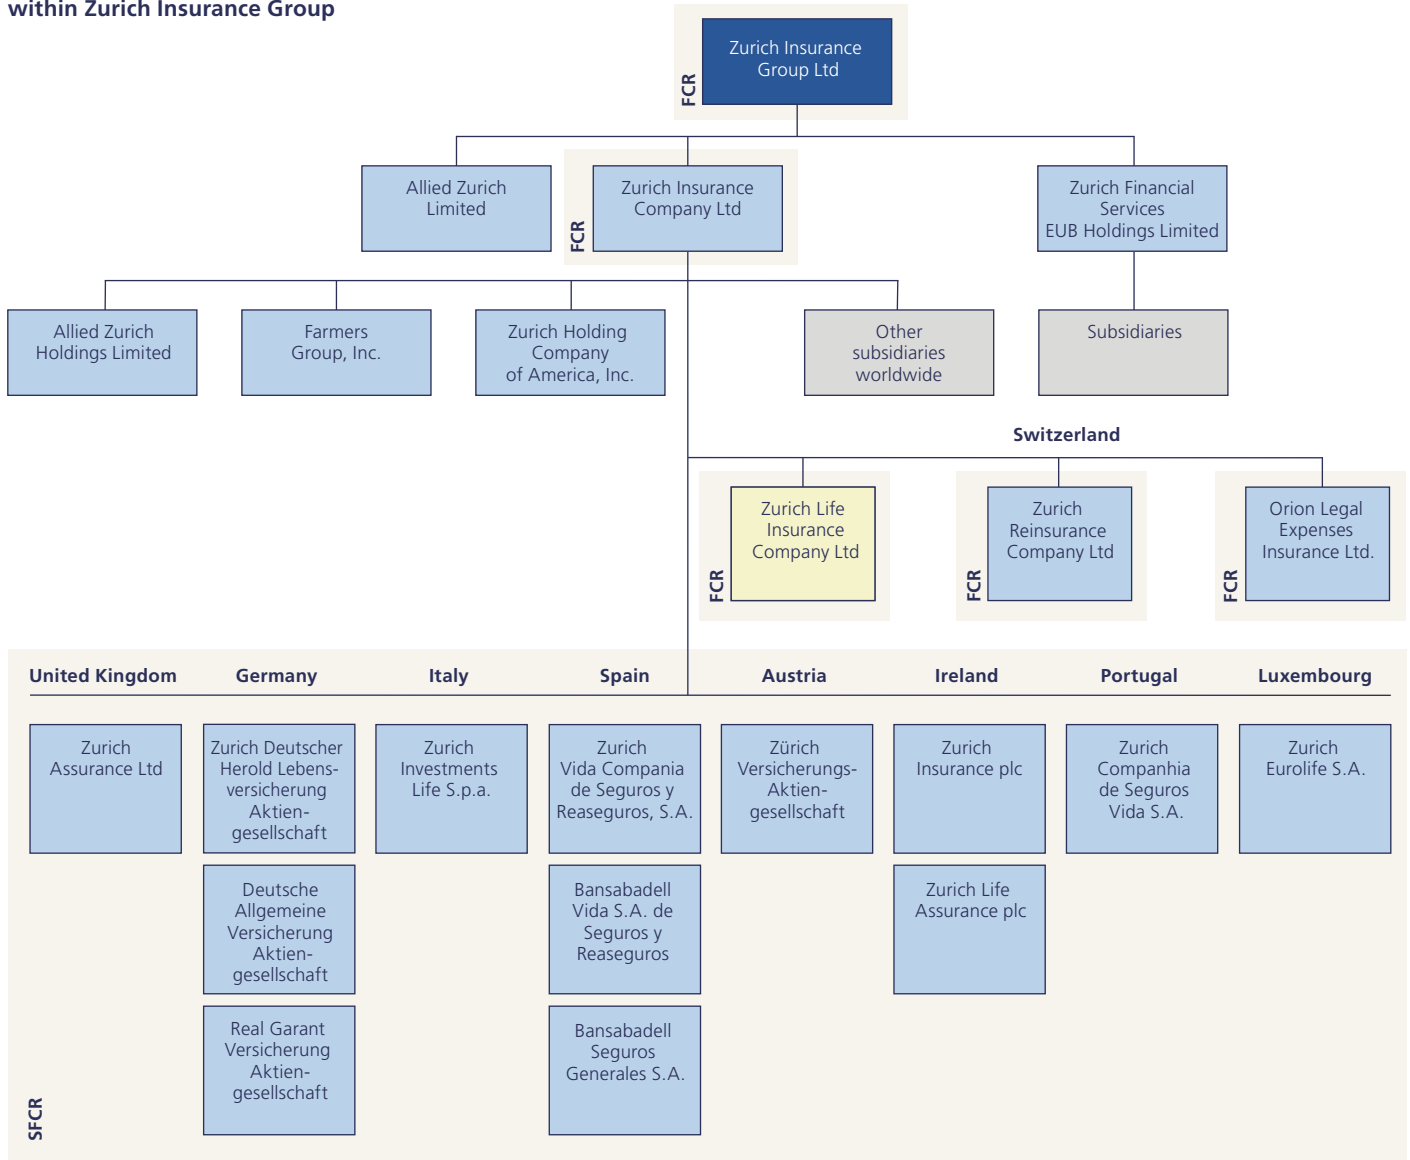

A. Business activities

A.1 Legal structure and major subsidiaries and branches

ZLIC is a life insurance provider serving both retail and corporate customers, primarily in Switzerland as well as through branches in Japan, Hong Kong and UAE. ZLIC is part of the Zurich Insurance Group ('Zurich' or 'the Group').

The Group discloses more information on its risk and capital management in its risk review, an integral part of Zurich Insurance Group's Annual Report available on www.zurich.com.

Public reporting on solvency and financial condition within Zurich Insurance Group

SFCR: Solvency and Financial Condition Report (Solvency II; from 2016) **FCR:** Financial Condition Report (Swiss regulation; from 2017)

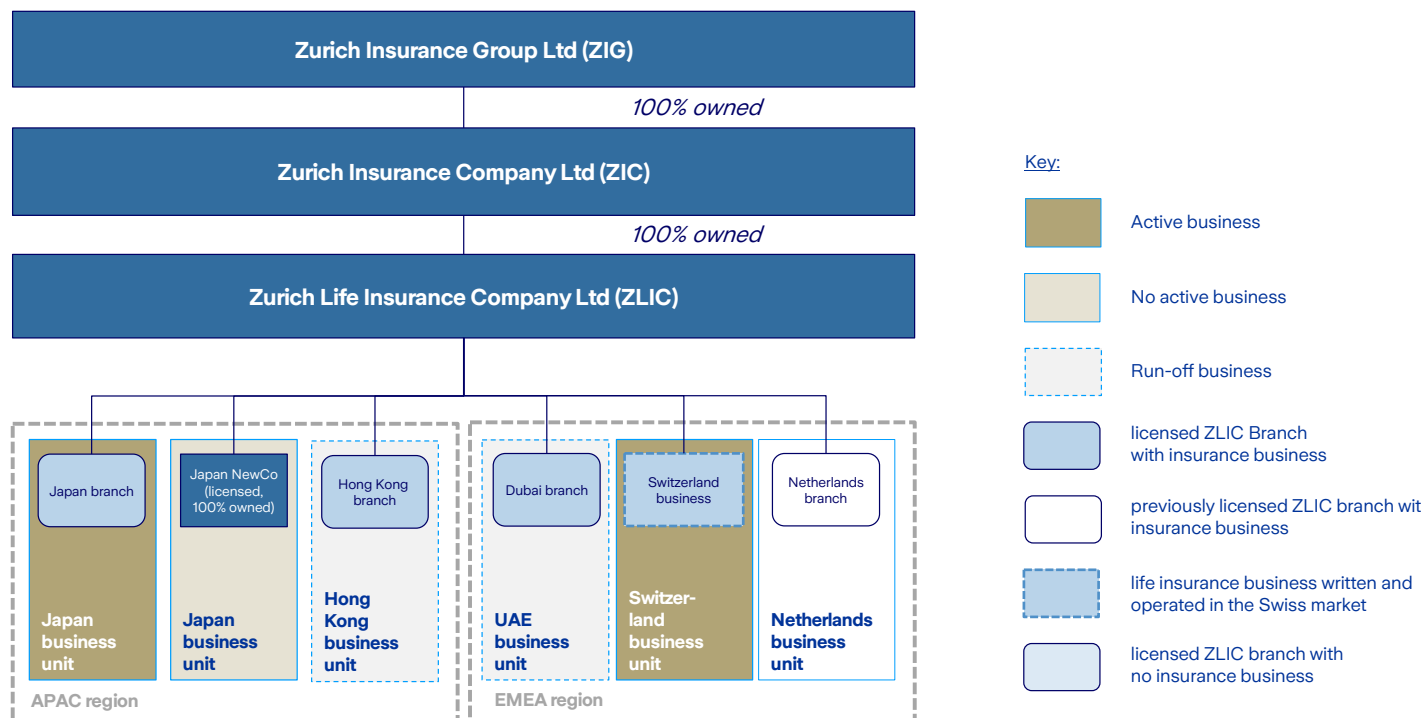

■ Subsidiary ■ Group of subsidiaries ■ Current disclosure

Note: The purpose of the chart above is to provide a simplified overview of the Group's major subsidiaries (as of December 31, 2020), with special focus on the public reporting of their solvency and financial condition. Please note that this is a simplified representation showing entities that must publish such a report and therefore it may not comprehensively reflect the detailed legal ownership structure of the entities included in the overview. The ordering of the legal entities under each country is not indicative of ownership; these are independent legal entities.

A. Business activities (continued)

ZLIC entity structure

The chart below shows the simplified ZLIC entity structure in place since the second quarter of 2020.

Listing of branches or businesses with a significant share of the business in relation to ZLIC:

- Switzerland generated a GWP of CHF 1.4 billion in 2020, which represents roughly 74 percent of the overall ZLIC GWP for 2020.
- Japan generated a GWP of CHF 0.4 billion in 2020, which represents roughly 24 percent of the overall ZLIC GWP for 2020.
- Hong Kong generated a GWP of CHF 0.04 billion in 2020, which represents roughly 2 percent of the overall ZLIC GWP for 2020.

Significant subsidiaries and shareholdings

ZLIC holds 100% ownership and voting rights of a subsidiary in Japan, Zurich Life Insurance Japan Company Ltd, with carrying value equal to the paid-in capital of CHF 9 million as of December 31, 2020. ZLIC has no other significant subsidiaries with a carrying value of more than CHF 5 million.

Significant indirect subsidiaries

ZLIC has no significant indirect subsidiaries as of December 31, 2020.

Quantitative and qualitative information about special purpose vehicles (e.g., risk transfer and capital transfer companies) and joint ventures

ZLIC does not currently hold any special-purpose vehicles.

A. Business activities (continued)

A.2 Information about the company's strategy, objectives and key business segments

ZLIC strategy is derived from, and consistent with, the Group strategy. The ZLIC strategy is reviewed on an annual basis. In 2020 ZLIC confirmed the strategic focus areas, and retains the main aspects as outlined below:

- ZLIC's strategic focus remains on protection and capital-efficient savings products in full alignment with the Group's approach.
- ZLIC will continue to leverage the business model in cooperation with the Vita foundations and Zurich Invest AG in Switzerland.
- ZLIC will continue to aim to promote profitable top-line growth by focusing on particular strategic market segments.

Switzerland:

ZLIC in Switzerland is a major life insurer in the Swiss market in terms of gross written premiums and policy fees and accounts for approximately 74 percent of total ZLIC's business. ZLIC operates both a retail and commercial business in Switzerland. Retail products include pure risk, endowment, annuities, unit-linked and hybrid unit-linked products. As part of the long-term vision and business strategy, ZLIC in Switzerland continued to move to a more efficient, simple and customer-focused organization with customer satisfaction being measured over key touchpoints such as new business, claims, complaints-handling and customer service metrics. ZLIC in Switzerland aims to build a culture where customer expectations will be met at all times by focusing on enhancing customer-oriented processes. ZLIC in Switzerland continued to focus on intelligent protection and capital-efficient solutions and on maintaining strict underwriting discipline, in particular on guarantees. On the distribution side, automated interfaces were developed and are planned to be rolled out to all agencies to facilitate interaction with customers. The sales support model has been aligned to enhance cross-selling capabilities. At the same time, ZLIC in Switzerland continued to strengthen the distribution relationships while seeking to establish alternative distribution channels to realize upselling potential. From an operational perspective, ZLIC in Switzerland is streamlining the IT and process landscape through an end-to-end platform aiming at increasing efficiency and customer satisfaction while improving reporting capabilities and standardizing processes.

Japan:

ZLIC Japan branch's retail business with key products covering death, critical illness and medical/hospital continued to grow in 2020, predominantly driven by competitive protection products. The Japan branch has achieved a sustainable niche position in the fastest growing channels and most profitable product segments. ZLIC Japan branch successfully transitioned to a multi-channel model selling through independent financial advisors (IFAs), direct business and bank distribution. Further investments were undertaken to expand direct capabilities and increase synergies between IFA's as well as bank distribution partners to exploit new business opportunities and continue growth in target segments. In line with the Group's and ZLIC's simplification strategy, a new insurance company, Zurich Life Insurance Japan Company Ltd, has been set up and licensed in Japan. The insurance business of ZLIC's Japan branch was transferred on April 1, 2021 to ZLIC's Japan subsidiary through a Contribution in Kind.

Hong Kong:

Hong Kong retail business was placed in run-off as of December 31, 2013.

Sourcing of critical functions

To improve the governance structure while accounting for recent regulatory developments, ZIC and ZLIC entered into a revised outsourcing agreement as per January 1, 2018. ZLIC has outsourced all business, management and control functions' services (excluding non-transferable tasks, board duties and branch business) to ZIC. On July 19, 2017 ZLIC and ZIC established an intra-group staffing agreement ('Personalverleihvertrag'). This staffing agreement insources to ZLIC the staff to fill the roles and responsibilities of the members of the Management Board, the appointed actuary and the heads of risk management and compliance as per FINMA requirements. All other functions of ZLIC remain outsourced to ZIC.

A. Business activities (continued)

A.3 Information about the company's external auditors as per Article 28 ISA 8

ZLIC's external auditors for 2020 were PricewaterhouseCoopers AG. ZLIC's Annual Report 2020 including the auditor's opinion is available on <https://www.zurich.com/en/investor-relations/%20results-and-reports/other-statutory-filings>.

A.4 Significant unusual events

For significant events during 2020 and thereafter, please refer to the Annual Report 2020 of Zurich Life Insurance Company and Zurich Insurance Group, respectively, as well as to the news releases available at <https://www.zurich.com/en/media/news-releases>. No other significant events are to be reported.

B. Performance

B.1 Underwriting performance

B.1.1 Gross written premiums and policy fees

Gross written premiums and policy fees decreased by 7 percent to CHF 1,861 million compared to 2019. Key drivers were less new business written and decrease in social insurance salary sums in Switzerland, despite continuous growth of the business in Japan.

Gross written premiums and policy fees by type of business	in CHF millions, for the years ended December 31	
	2019	2020
Group insurance Switzerland	884	732
Group insurance abroad	–	–
Individual insurance Switzerland	660	655
Individual insurance abroad	41	36
Health insurance abroad (Japan)	403	438
Reinsurance assumed	5	–
Gross written premiums and policy fees	1,994	1,861

Gross written premiums and policy fees by country	in CHF millions, for the years ended December 31	
	2019	2020
Switzerland	1,549	1,387
Hong Kong	41	36
Japan	403	438
Dubai	–	–
Gross written premiums and policy fees	1,994	1,861

B.1.2 Claims paid, annuities and loss adjustments expenses, gross of reinsurance

Total claims paid, annuities and loss adjustment expenses, gross, increased by CHF 128 million to CHF 2,028 million from CHF 1,900 million in 2019. The COVID-19 pandemic had a low impact on claims.

Claims paid, annuities and loss adjustment expenses, gross	in CHF millions, for the years ended December 31	
	2019	2020
Maturity benefits	(638)	(550)
Death benefits	(152)	(160)
Annuity payments	(404)	(390)
Disability and health benefits	(257)	(291)
Surrenders	(449)	(637)
Claims paid, annuities and loss adjustment expenses, gross	(1,900)	(2,028)

B. Performance (continued)

B.2 Investment performance

B.2.1 Investment income

Investment income decreased by CHF 63 million or 7 percent to CHF 839 million in 2020 from CHF 902 million in 2019. Main drivers were less realization of capital gains on real estate (21 objects sold in 2020 compared to 38 in 2019) and less write-ups on equity and debt securities due to the challenging market environment.

Investment income	in CHF millions, for the years ended December 31		Current income		Realized capital gains		Write-ups		Totals	
	2019	2020	2019	2020	2019	2020	2019	2020	2019	2020
Real estate	148	131	327	303	–	–	475	434		
Investments in subsidiaries and associates	–	–	–	–	–	–	–	–		
Debt securities	88	85	7	15	145	122	240	222		
Policyholders' loans and other loans	4	3	1	–	–	–	5	3		
Mortgage loans	38	34	–	–	–	–	38	35		
Equity securities	12	9	41	63	77	62	130	134		
Mixed investments funds	6	5	–	–	–	–	6	5		
Other investments	8	6	–	–	–	–	8	6		
Investment income	302	273	377	381	223	184	902	839		

B.2.2 Investment expenses

Investment expenses remained stable in 2020 compared to prior year. In general, there were higher write-downs in 2020, which are offset by lower realized capital losses.

Investment expenses	in CHF millions, for the years ended December 31		Realized capital losses		Write-downs		Totals	
	2019	2020	2019	2020	2019	2020	2019	2020

Policyholders' loans and other loans	(21)	(1)	–	–	(21)	(1)		
Mortgage loans	–	–	–	–	–	–		
Equity securities	(1)	(7)	(3)	(10)	(4)	(17)		
Mixed investments funds	–	–	(2)	(4)	(2)	(4)		
Other investments	–	–	–	–	–	–		
Other investment expenses	n.a.	n.a.	n.a.	n.a.	(62)	(58)		
Investment expenses			(24)	(16)	(15)	(25)	(100)	(99)

B. Performance (continued)

B.3 Performance of other activities

B.3.1 Administrative and other expenses

Administrative and other expense decreased by CHF 42 million to CHF 170 million from CHF 212 million in 2019. The main drivers for this change were higher gains and losses on foreign currencies, on which a net gain of CHF 54 million resulted in 2020 compared with a net gain of CHF 33 million in 2019. In 2019 a contribution of CHF 26 million to the Z Zurich Foundation is included in operating administrative expenses. No such contribution was paid in 2020.

Administrative and other expense	in CHF millions, for the years ended December 31	2019	2020
	Operating and administrative expenses	(169)	(152)
	Personnel expenses ¹	(66)	(66)
	Gains and losses on foreign currency derivatives	153	173
	Foreign currency transaction gains and losses	(120)	(119)
	Amortization of software	(7)	(4)
	Depreciation of equipment	(1)	–
	Restructuring costs	(3)	(1)
	Administrative and other expense	(212)	(170)

B.3.2 Other income

No significant other income has been realized in 2020 (CHF 7 million). In 2019 the other income (CHF 107 million) was mainly driven by a release of other provision of CHF 120 million.

B.3.3 Comments to the income statement in appendix 1: Quantitative templates

Net income before taxes

The net income before taxes decreased by CHF 202 million compared to 2019. Main driver for this movement is the decrease of the net investment result, which decreased by CHF 184 million or 19 percent, compared to 2019, while the technical result remained stable.

Gross written premiums and policy fees

In total, gross written premiums decreased by CHF 133 million or 7 percent to CHF 1,861 million compared to 2019. This was mainly driven by less new business written in Switzerland, whereas partially offset by new business written in Japan.

Investment income

The net investment result decreased mainly due to selling properties, which led to lower rent income. This was offset by slight increases in equity, debt and other investment income in 2020.

Unit-linked business

Compared to the previous year, the net investment result on unit-linked investments decreased by CHF 93 million to CHF 43 million in 2020 from CHF 136 million in 2019.

C. Corporate governance and risk management

C.1 Corporate governance

ZLIC is subject to insurance supervision by FINMA. The Swiss insurance supervision Act (ISA) requires Swiss insurance companies to establish and maintain a corporate governance structure including an effective risk management and internal control system that is appropriate to their business activities. In addition to the supervision exercised by FINMA, ZLIC and its branches are supervised according to the requirements of relevant local supervisory authorities.

The principles of corporate governance are incorporated and reflected in a number of corporate documents, in particular the Articles of Incorporation, the Organizational Rules, the charter of the ARC of the Board and the ZLIC Governance Framework. ZLIC has established an approach based on three lines of defense aimed at clearly identifying, assessing, owning, managing and monitoring risks:

- The first line of defense consists of business management that takes risks and is responsible for day-to-day risk management.
- The second line of defense consists of the two control functions, risk management and compliance. The second line provides the frameworks to manage risks, offers independent challenge, oversight, monitoring and advice to support the first line in managing risks.
- The third line of defense consists of the assurance function audit. The third line provides independent and objective assurance regarding the adequacy and effectiveness of risk management, internal controls and governance processes and operations in general.

C.1.1 Board of Directors (Board)

The Board, under the leadership of the chairman, is responsible for determining the overall strategy of ZLIC and the supervision of management. It holds the ultimate decision-making authority for ZLIC, except for decisions on matters reserved for the shareholders' general meetings. The Board prepares the AGM and implements its resolutions. In particular, the Board is responsible for taking actions in the following areas:

- ZLIC strategy: The Board regularly reviews and discusses ZLIC's business portfolio including its target market, customer and intermediary's strategy.
- Finance: The Board approves the financial and operating plan annually and establishes guidelines for capital allocation and financial planning. The Board also reviews and approves the annual and quarterly financial statements and supervises the compilation of the annual report.
- Structure and organization of ZLIC: The Board determines and regularly reviews the basic principles of the structure and major changes within the management, including major changes of management functions. The Board also reviews the corporate governance documentation (Articles of Association, Organizational Rules, Audit and Risk Committee Charter) which is under its competence.
- Business development: The Board regularly discusses and approves major developments, pertaining, for example, to acquisitions and disposals of businesses and assets, investments, new businesses opportunities, mergers, joint ventures, cooperations and restructurings of books of business, as necessary.
- Risk appetite statement: The Board signs-off the risk appetite statement annually.

Audit & Risk Committee (ARC)

Management is responsible for preparing ZLIC's financial statements, managing risk, developing and maintaining internal controls and ensuring appropriate governance processes, the ARC serves as a focal point for discussion and communicating matters related to financial reporting oversight, internal controls, compliance and risk management, and reports on these matters to the full Board. To perform these tasks, the ARC regularly receives information about important audit findings, including adverse opinions, mitigation actions and management concerns. Internal audit, risk management and compliance functions and ZLIC's management ensures that issues affecting ZLIC's operations are brought to ARC's attention, and that action is taken as necessary.

C. Corporate governance and risk management (continued)

Composition of Board and Audit & Risk Committee (as of December 31, 2020)

Name	Residence	Position held
		Chairman of the Board
Urban Angehrn	Greifensee, Switzerland	Member of the Audit & Risk Committee
Christian Felderer	Zurich, Switzerland	Member of the Board (independent)
		Member of the Board
Helene Westerlind	Bäch, Switzerland	Member of the Audit & Risk Committee
Gary Shaughnessy	Hampshire, United Kingdom	Member of the Board
Barry John Perkins	Zurich, Switzerland	Member of the Board
		Member of the Board (Independent)
Robert David Campbell	Edinburgh, United Kingdom	Chairman of the Audit & Risk Committee

Changes to composition of Board and Audit & Risk Committee in 2020

The composition of the Board and the ARC of ZLIC changed during 2020 as follows:

- Election of Barry John Perkins per August 25, 2020 as member of the board.

C.1.2 Executive management

In accordance with the Articles of Incorporation and the Organizational Rules of ZLIC, the Board appointed a CEO for the company and delegated authorities to the CEO. The CEO is responsible for managing the business and representing the company, subject to the Organizational Rules enacted by the Board.

The Board also appointed the members of the executive management board (Management Board).

Under the supervision of the CEO, members of the Management Board are individually responsible for the business functions assigned to them.

The tasks of the Management Board include:

- Implementing the overall strategy and developing individual units, subject to any overriding directives and to the principles of a decentralized management organization.
- Achieving the strategic and operational objectives of the individual business units.
- Supporting and supervising the heads of the individual business units as required, taking into account their needs and their level of competence.
- Promoting know-how transfer within the company and, in particular, within their respective business units.
- Representing the interests of their business units, geographic regions and their respective business units vis-à-vis other business units/regions and superordinated bodies or functions.
- Coordinating activities in countries with multiple business units.
- Reporting regularly to the CEO. Upon invitation of the CEO or the Chairman, the members of the Management Board also present their reports at the meetings of the Board.

Composition of Management Board (as of December 31, 2020)

Name	Residence	Position held
Juan José Beer	Möriken-Wildegg, Switzerland	CEO
Andreas Henke	Zurich, Switzerland	CFO
Sandro Meyer	Horgen, Switzerland	Head CLP & Life Technical Functions
Tim Howell	Singapore	Head of Finance APAC
Erik Erixon	Richterswil, Switzerland	Chief Life Actuary Switzerland

Changes to composition of the Management Board in 2020

- Bettina Bornmann resigned per February 1, 2020
- Election of Andreas Henke on February 1, 2020

C. Corporate governance and risk management (continued)

C.2 Risk management

C.2.1 Risk management framework

Enterprise Risk Management (ERM) is embedded in the system of governance and is designed to support the decision-making procedures by providing consistent, reliable and timely risk information and protecting Zurich's capital, earnings and reputation from risks that exceed established risk tolerances. These risk tolerances define maximum willingness and ability to take risk overall and with respect to specific risk types. Actions are defined where necessary to mitigate potential negative consequences.

ZLIC has a defined risk appetite. The risk appetite is fixed through existing limits, e.g., severity categories for the TRP and various limits defined in the Zurich Risk Policy (ZRP). ZLIC's risk appetite statement is reviewed by the Management Board. Once approved, it is signed off by the Board at least annually, and adjusted if necessary, during the year. As part of the ERM, the risk management function calculates risk tolerance limits annually and evaluates actual and potential breaches. Compliance with the risk appetite statement, however, lies with the Management Board (refer to the tasks of Management Board). The risk management function and other functions, such as compliance, legal, actuarial and finance, develop and operate methodologies to identify, manage and mitigate all types of risks. Escalation procedures are in place for all risk types. The risk management function monitors overall risks, including specific risk types, and escalates any risk that exceeds the level of defined risk tolerance, in line with the governance system.

The risk management framework is based on a governance process that sets forth clear responsibilities for taking, managing, monitoring and reporting risks.

The Zurich Risk Policy (ZRP) is the Group's main risk governance document and therefore fully applies to ZLIC. The policy describes Zurich's risk management framework, identifies Zurich's principal risk types and defines Zurich's appetite for risks. Risk-specific policy manuals provide guidelines and procedures to implement the principles of the Zurich Risk Policy. Ongoing assessments verify that requirements are met. The ZRP and its manuals are attested annually by ZLIC Management.

An Own Risk and Solvency Assessment (ORSA) for ZLIC is completed annually. The ZLIC ORSA was submitted to the regulator at the beginning of 2021. To ensure the Board is adequately involved in the ORSA process, ZLIC's CRO provides a quarterly update, thus allowing the Board to challenge findings and consider its views in its decision-making process.

C.2.2 Risk management organization

ZLIC's CRO leads the ZLIC Risk Management function, which aims to ensure that risks are identified, measured, managed, monitored and reported throughout the entity. The ZLIC CRO is responsible for oversight of risks across the legal entity.

ZLIC's risk function is vertically integrated and is led by the appointed ZLIC CRO. The ZLIC CRO has a functional reporting line to the EMEA head of risk and an administrative reporting line to the ZLIC CEO. The ZLIC CRO regularly provides risk updates to the management team and the Audit & Risk Committee of the Board of Directors of ZLIC.

The ZLIC risk management team is part of Zurich's Group Risk Management organization, which consists of central functions at Group level and a decentralized risk management network at regional, BU and functional levels.

C.2.3 Risk assessment and reporting

Risk profile reports are generated regularly at local, branch, and ZLIC levels. ZLIC has procedures (e.g., ZLIC Risk Appetite Statement, TRP, control frameworks) to identify and report risks to senior management and the Board in a timely way. To foster risk transparency, each quarter the ARC receives an integrated assurance report and other, additional updates throughout the year.

ZLIC assesses risks systematically and from a strategic perspective through its proprietary TRP process, which allows ZLIC to identify and evaluate the probability and severity of risk scenarios. As part of the TRP process, mitigation actions are defined and executed by the business, while risk management monitors improvements. The TRP process is integral to how Zurich deals with change, including changes to the business environment and other factors that could affect its business, and is particularly suited to evaluating strategic risks as well as risks to Zurich's reputation, capital and earnings. This process is conducted annually, reviewed quarterly and is closely tied to the strategy and planning processes of ZLIC.

C. Corporate governance and risk management (continued)

C.3 Internal control system

At Zurich, various governance and control functions help to identify and appropriately manage risks. Internal controls are in place and Zurich seeks to ensure that they operate effectively. This coordinated effort to ensure that ZLIC's controls work appropriately is referred to as 'integrated assessment and assurance'. The board is ultimately responsible for supervising these assurance activities. Although each party in the process maintains its distinct mandate and responsibilities, those involved work closely together, regularly exchange information, and engage in planning and other activities. This approach supports management in its responsibilities and provides confidence that risks are appropriately addressed and that adequate mitigation actions are implemented.

With regard to internal controls, ZLIC follows the framework and guidelines prescribed by the Group. The Board has overall responsibility to determine the strategy and set out the goals of the internal control system. In particular, the Board regulates and supervises the internal control system. The Board has appointed the ARC to review and submit the strategy and goals of the Company's internal control system for approval to the Board; the Board receives and reviews periodic reports from internal audit, risk management and compliance functions with regard to the internal control system. The Management Board and the Board review and approve the strategy and scope of the internal control system on an annual basis.

ZLIC considers controls to be key instruments for monitoring and managing financial reporting, compliance and operational risks. The internal control system for ZLIC aims to ensure the reliability of ZLIC's financial reporting, make operations more effective and ensure legal and regulatory compliance. ZLIC bases its internal control system on the Zurich Insurance Group's internal control system methodology.

Based on the Group minimum requirements, ZLIC enhances the scope of the internal control system, taking into account its risk appetite and the Group's basic minimum requirements. In particular, this includes controls over statutory and regulatory reporting and local operational key controls to ensure regulatory compliance. The scope of the internal control system takes into consideration the inherent risk to the operation, for example, due to processes, systems and people.

C.4 Compliance

ZLIC is committed to complying with all applicable laws, regulations, and its stated corporate values.

Compliance is a second-line control function responsible for:

- Enabling the business to manage its compliance risks
- Being a trusted advisor
- Providing independent challenge, monitoring and assurance
- Assisting management to promote a culture of compliance and ethical behaviors

ZLIC's compliance function is vertically integrated and is led by the appointed ZLIC chief compliance officer. The ZLIC chief compliance officer has direct access to the chairman of the Audit & Risk Committee of ZLIC, to the ZLIC CEO and a vertically integrated reporting line to Group compliance EMEA layer. The ZLIC chief compliance officer regularly provides compliance updates to the management team and the Audit & Risk Committee of ZLIC.

ZLIC's compliance function performs its activities according to the annual compliance plan and reports on progress measured against the plan, as well as outcomes and insights to management, the Board of Directors of ZLIC and Group compliance. The annual compliance plan is a risk-based plan and is prepared based on an independent forward-looking compliance risk assessment, independent assurance outcomes and taking into account key risk drivers in both the internal and external environments.

ZLIC's compliance function provides an independent compliance view on the key compliance risks to the business and performs independent risk-based assurance activities, while challenging the business as necessary. In addition, the function provides compliance risk insight through relevant and targeted reporting.

ZLIC's compliance function implements Group compliance policies and issues additional compliance policies for ZLIC if required. ZLIC's compliance function supports a strong compliance culture within ZLIC through training and awareness initiatives in line with Zurich's code of conduct.

C. Corporate governance and risk management (continued)

Zurich encourages its employees to report improper conduct that they believe is illegal, unethical, or violates Zurich's code of conduct, Group and local policies and other internal requirements. Employees are free to report their concerns to management, human resources, the Group's legal department, its compliance function, or through the Zurich ethics line (or similar service provided locally) - a phone and web-based service run by an external specialist provider to maintain anonymity if this is requested by the employee. ZLIC does not tolerate retaliation against any employee who reports such concerns in good faith.

C.5 Internal audit

The internal audit function, Group Audit (GA), is responsible for providing independent and objective assurance to the Board, the ARC, the CEO and management, on the adequacy and effectiveness of ZLIC's risk management, internal control and governance processes.

GA develops and delivers an annual risk-based audit plan, which is updated as risks change. The audit plan takes into account the full spectrum of business risks, including concerns and issues raised by the ARC, management and other stakeholders. The ARC is responsible for approving the annual plan and any changes to it.

GA executes the plan in accordance with GA's principles-based engagement standards, which incorporate and comply with the International Standards for the Practice of Internal Auditing, issued by the Institute of Internal Auditors (IIA).

Audit staff are expected to be independent and objective in all assignments and to do nothing that might prejudice or be perceived as prejudicing independence or objectivity. GA has no operational responsibilities over the areas it reviews and, to ensure independence, all GA staff report (via audit managers) to the head of GA.

GA is authorized to review all areas and has full, free and unrestricted access to all activities, accounts, records, property and personnel necessary to fulfill its duties. In the course of its work, GA takes into consideration the work of other assurance functions. In particular, GA coordinates its activities with the external auditors, sharing risk assessments, work plans, audit reports and updates on audit actions.

GA is responsible for ensuring that issues which it identifies that could impact ZLIC's operations are communicated to the responsible management, CEO and the ARC. GA issues periodic reports to management and the ARC, summarizing audit findings, the status of corrective actions and the status of plan execution. A member of GA attends each ARC meeting.

The ARC assesses the independence of GA and reviews its activities, plans and organization, the quality of its work and its cooperation with the external auditors. As required by the IIA International Standards, an independent qualified assessor reviews the quality of GA at least every five years. This review was conducted most recently in 2016 and 2017. The results confirmed that GA's practices comply with all IIA standards. The next review is planned for 2021.

C. Corporate governance and risk management (continued)

C.6 Actuarial function

The ZLIC actuarial function provides actuarial governance and reporting in line with Swiss laws and insurance regulations.

Within ZLIC, the ZLIC chief actuary coordinates the work of the ZLIC actuarial function and is responsible for the ZLIC governance of acceptance of new business and reinsurance. The ZLIC actuarial function prepares the tied assets and SST in addition to meeting the actuarial reporting requirements of the Group. The ZLIC appointed actuary reports to the ZLIC chief actuary and is responsible for ensuring the adequacy of local statutory reserves. The ZLIC appointed actuary is, in addition, responsible for adequate pricing assumptions, for the technical business plan and for the adherence to regulatory requirements referring to tied assets.

The ZLIC chief actuary reports to the ZLIC chief financial officer. The ZLIC chief actuary and ZLIC appointed actuary give regular updates to the ZLIC ARC. The ZLIC actuarial function also follows the governance, reporting and process standards set by the Group actuarial function. The actuarial function at Group level is led by the Group chief actuary, reporting directly to the Group chief financial officer. The Group chief actuary reports regularly to the Group ARC on behalf of the Group actuarial function.

D. Risk profile

D.1 Introduction and ZLIC's key risks

ZLIC is fully integrated into Zurich's Groupwide risk assessment process. For more information on ZLIC's approach to risk management, please refer to the risk review section in the Zurich Insurance Group Annual Report 2020, which describes the Group's risk management framework and risk governance, reports on capital management and capital adequacy, and presents an analysis of the main risks. As mentioned in chapter A.1, ZLIC's financial strength is enhanced by being part of Zurich Insurance Group.

ZLIC uses two sources for the identification and assessment for risk. One is the risk and capital model as required by SST. This model quantifies financial risks which threaten the capital of the company over a one-year time horizon. The other source is the TRP which identifies all risks that threaten capital, earnings and reputation over a three-year planning horizon. The TRP process is applied to identify, evaluate, control and monitor these risks. Mitigation actions are defined for key risks. The TRP is completed annually with management's participation. Tracking the actions taken, and providing updates on risks, is carried out quarterly. Risk management is responsible for managing these tasks on an ongoing and timely way as part of its regular quarterly activities.

The significant risks for ZLIC, as measured by capital metrics, are market risk, life insurance risk, and credit risk as shown in the following table.

The figures shown are based on the SST standard model used by ZLIC. The current information on solvency shown in the report corresponds to the information submitted to FINMA in April 2021 and is subject to regulatory review.

Capital required for various types of risk:

Target capital by risk type	in CHF millions, for the years ended December 31	2019	2020	Change
Derivation of target capital				
Insurance risk		1,682	1,608	(75)
Market risk		1,856	1,881	24
Credit risk		618	658	40
Diversification effects		(873)	(1,042)	(169)
Risk margin and other effects on target capital		1,241	1,174	(67)
Target capital		4,524	4,278	(246)

The figures shown in the table above include diversification within each risk type. The respective movements are explained in section G. Risk margin is a material component of the target capital, making allowance for the cost of holding capital over the duration of the in-force portfolio till it runs off, in respect of insurance risks and the non-hedgeable portion of market risk. The change to the new SST standard model for credit risk used by ZLIC in Q4 2020 improves diversification benefits.

ZLIC uses its assessment processes and tools, including the TRP process, to reduce the risks of strategic business decisions. Critical key risks identified and assessed during the TRP conducted in the fourth quarter 2020 included:

- Asset market volatility and investment returns (Market risk)
- Reserve adequacy Life (Life insurance risk)

To reduce the likelihood or severity of key risks, mitigating actions have been developed and implemented to reduce the likelihood or severity of key risks. The status of these plans is monitored on a quarterly basis, including reviewing key risks and assessing the exposure.

The remainder of this section considers in turn each of the key categories of risk faced by ZLIC. ZLIC holds capital under SST for life insurance risk, market risk and credit risk.

D.2 Life insurance risk

As a life insurance company, ZLIC is in the business of assuming others' risks with regard to mortality, longevity and morbidity/disability. In the course of doing business ZLIC may be exposed to making greater-than-expected current and future payments resulting from taking on those risks. Life insurance risk exposure stems primarily from changes in the expected value of provisions.

D. Risk profile (continued)

Life insurance risk is actively monitored, primarily by the ZLIC actuaries. In calculating premiums and reserves, the actuaries rely on the relevant local mortality, morbidity and disability tables, as well as on tables developed internally, and use forecasting tools to estimate how the book of business will likely develop. Their analyses are presented to the Management Board to determine if proposed measures are sufficient to counter any negative developments.

Concentration risk arises if a company engages in single or highly correlated risks that have a significant damage or loss potential for life insurance in the area of underwriting and investment.

Due to diversification, concentration risk in underwriting is very low. Large risks are passed on to reinsurers. There are effective accumulation controls in place.

D.3 Market risk

Market risk is the risk of a loss or an adverse development in ZLIC's financial situation, resulting directly and/or indirectly from volatility in market prices of assets, liabilities and financial instruments. In line with the investment strategy, the following sub-risks are taken into account as specific categories: interest rate risk, equity risk, real estate risk, credit spread risk including credit rating migration risk, credit default risk, currency risk and concentration risk.

Market risk is very significant for ZLIC when taking total risk capital requirements within the SST into account. The greatest market risks for ZLIC are credit spread, interest rate, and real estate risk. Interest rate risk is of particular relevance to ZLIC, due to the characteristics of life insurance liabilities. Interest rate risk arises if the market value of assets declines by more or increases by less than the market value in liabilities, resulting in lower risk-bearing capital for shareholders. Changes in interest rate risk, especially in environments where interest rates remain low, also puts pressure on net investment income, and may lead to changes in liabilities to which ZLIC is committed.

The interest rate sensitivity of the investments is regularly reviewed as part of ALM analysis and in the local ALMICs, and, where necessary, managed by taking the appropriate measures. Investment management is of particular importance in this regard, as outlined in the ZRP. Duration and convexity gaps between investment portfolio and insurance liabilities must be addressed through consistent ALM. It is also important to actively review the market environment to identify potential opportunities to further reduce interest rate risk. Transactions with derivative financial instruments are undertaken exclusively for hedging purposes.

The risk of market price changes that may have a material impact on ZLIC's capital and earnings can be mitigated through rigorously defined asset-class targets and limits, as well as interest-rate sensitivity targets and limits, which are regularly monitored, reported and reviewed in the local ALMICs. Investment management makes every effort to achieve adequate asset diversification and maintain good credit quality within the bond portfolio.

Risks pertaining to single securities are limited through a well-diversified investment portfolio, as well as through an index-driven investment policy that includes specific tracking-error targets.

ZLIC's real estate portfolio is substantial and almost all located in Switzerland. ZLIC's Swiss real estate portfolio is managed by Zurich Invest AG (ZIAG). Apart from adhering to ZRP rules and the FINMA investment directive, ZIAG carries out an annual revaluation of the property portfolio and also takes into account any subsequent impairment.

For ZLIC, the investment return is monitored as a key risk; investment management explores opportunities to enhance economic and accounting returns within economic capital (SST) guidelines and tied asset constraints. A potential change in real estate values represents another key risk. Investment management reviews the real estate strategy for Switzerland to ensure portfolio resilience in the event of a market correction.

Potential concentration risk in investments is limited by the appropriate level of diversification. The strategic asset allocation (SAA) aims to diversify investments across different asset classes, countries, industry sectors and issuers. To further reduce the concentration risk, the investment guidelines, which follow FINMA guidelines, as well as Swiss Insurance Supervision Law, define limits on sector and issuer, depending on asset class or issuer. Investment supervision and monitoring is done on a regular basis by the ALMIC.

To control concentration risk, ZLIC adheres to provisions set out in the ZRP and adheres to all regulatory requirements related to the mix and range of investments.

D. Risk profile (continued)

D.4 Credit risk

Credit risk is the risk associated with a loss (default or credit migration) or potential loss due to counterparties failing to fulfill their financial obligations to ZLIC.

This risk to ZLIC can arise mainly in the following areas:

- Investments: The creditworthiness of counterparties in third-party investments is monitored on a regular basis by a forward-looking risk measure (duration times spread).
- Other credit risk comprises reinsurance credit risk, receivables credit risk and intragroup credit risk.

There is a permanent exposure to this risk, and it is monitored on a continuous basis.

The principles of the SAA are adhered strictly to manage investment credit risk. The SAA is a portfolio strategy that involves setting target allocations for various asset classes and includes periodically rebalancing the portfolio when positions deviate significantly from initial targets.

In cases in which credit risk deteriorates, receivables from policyholders are adjusted by a lump sum to avoid accumulating significant risk positions.

D.5 Operational risk

Zurich defines operational risk as the risk of loss resulting from inadequate or failed internal processes, people, and systems or from external events such as insufficient delivery of outsourcing partners, catastrophes, legislation or external fraud. Operational risk includes legal risk but excludes strategic and reputational risks.

ZLIC applies the following framework to assess operational risk

Zurich has developed a comprehensive framework based on a common approach to identify, assess, quantify, mitigate, monitor and report operational risk within the Group, which ZLIC also applies. The core components of the operational risk management framework are:

- Identification and assessment of operational risks. Risks identified and assessed above a certain threshold must be mitigated and escalated. Plans for mitigating actions are documented and tracked on an ongoing basis.
- Operational event management (OEM): The ZRP requires documentation and evaluation of operational events above a threshold in a Groupwide database. To avoid recurring operational loss events, near misses and complaints, mitigating actions are put in place.
- Reporting: Regular reports on the risk profile, current risk issues, adherence to risk policies and actions to make improvements are prepared. There are procedures in place for referring risk issues to the Management Board.
- Internal control system: Operational risks are managed by the internal control system which maintains operation of regular controls in all processes, IT applications and on entity level.

The ZRP manuals contain detailed guidelines for managing operational risks, as well as security, information security, IT, business continuity management, investment activities, internal insurance, fraud, outsourcing and project risks.

The Management Board actively and continuously monitors risks arising from intra-group outsourcing. External outsourcing agreements are reviewed according to a supplier compliance-assurance process defined in the ZRP manual for outsourcing ('Rules for Managing Risk in Outsourcing')

Operational risks pertaining to services supplied by third parties are systematically monitored. This is done through risk assessments, and, if necessary, by taking mitigation actions to reduce risk exposure. A review of mitigation actions is conducted at least quarterly.

Key operational risks comprise threats to achieving the overarching strategic goals of ZLIC.

D. Risk profile (continued)

D.6 Liquidity risk

Liquidity risk is the risk that ZLIC may not have sufficient liquid financial resources to meet its obligations when they fall due or would have to incur excessive costs to meet these obligations. ZLIC's policy is to maintain adequate liquidity to meet its liquidity needs under normal conditions and in times of stress.

ZLIC provides substantial liquidity to a ZIC cash pool. This pool includes a mechanism that allows ZLIC to retrieve liquidity from ZIC overnight. Ownership of the cash provided to the pool lies with ZLIC and its rights over this money are secured.

Application in life insurance

This risk can arise due to unexpected payment obligations to policyholders, from other payment obligations to contractors and from hedging activities, in the case that they cannot be covered promptly by asset sales for reasons of financial market illiquidity or can only be covered by asset sales at substantially reduced prices.

The volume of contingent payments is used to determine the level of liquid funds required to mitigate liquidity risk. Liquidity risk is also mitigated by comprehensive monthly liquidity planning, in which all relevant liquidity flows from assets and liabilities are reviewed, together with reinvestment risks or risks that can be minimized by pre-expiry-date sales on a consolidated basis. Investment management takes into account the marketability of the assets, as well as the expected net cash flows when planning asset transactions to cover the liquidity needs. Regular stress-based analysis further confirms the adequacy of ZLIC's available liquidity.

D.7 Other material risks

D.7.1 Strategic risk

Executing strategic plans implies risk-taking. This is necessary to make use of opportunities identified in the business plan, which assumes that the opportunities outweigh the corresponding risks. The annual ZLIC TRP supports the decision-making process in identifying, assessing and managing strategic risks.

D.7.2 Reputation risk

Reputational risk is the risk that arises from potential damage to the company's reputation as a result of a negative perception by the public (e.g., customers, business partners, shareholders, governments). Like strategic risk, reputational risk usually occurs together with other risks.

Zurich's code of conduct applies to all its employees. Employees must complete an annual training session to make them aware of our guidelines and approach, and employee surveys are regularly carried out, offering another way to identify potential risks to Zurich's reputation.

Reputation risk can also occur in isolation. Specific reputation risks are evaluated as part of the TRPs, and if necessary, addressed with appropriate mitigating measures. We have identified no significant reputation risks as of December 31, 2020.

E. Valuation

E.1 Overarching valuation principles

For SST calculations, all assets and liabilities are valued in accordance with economic principles in a market-consistent manner and their valuations are presented in the MCBS. In general, the MCBS applies the same fair value measurement and hierarchy as the Group IFRS annual financial statement, unless stated otherwise. In such cases, fair value is determined on a best-estimate valuation basis, without margins, using assumptions and parameters as defined by FINMA or based on management's judgment.

To summarize, the following valuation hierarchy applies for assets:

MCBS valuation principles		
	Highest priority for third-party assets, IFRS equity instruments and eligible capital instruments	Fair value as defined in the consolidated IFRS financial statements;
Mark-to-market		Fair value as defined in the consolidated IFRS financial statements; or
	If mark-to-market cannot be applied	Best estimate valuation using parameter or assumptions explicitly stipulated by FINMA (e.g.; liabilities valued at discounted cash flows using risk-free rate, thus, without consideration of own credit risk).
Mark-to-model		As a practical expedient, IFRS carrying value other than fair value is used as proxy to market-consistent valuation provided such measurement can be considered reasonable. For example, IFRS carrying value may be considered as a reasonable proxy based on the following considerations: <ul style="list-style-type: none"> – It represents current balances (e.g., cash accounts); or – It involves high-frequency turnover with daily settlements (e.g., operational clearing accounts); or – It is expected to be settled/realized within relatively short period after origination (generally, within three months and always less than twelve months) and is exposed to only insignificant risk of changes in value.
IFRS carrying value		

When applying the mark-to-model method, adequate and best-practice valuation models and methodologies are used and sufficiently documented.

Within asset classes, investments accounted for at fair value under IFRS will be valued the same in MCBS. This includes available-for-sale equity and debt instruments, real estate for investment, investment trusts, hedge funds, derivatives and unit-linked investments.

For investments accounted for at nominal value, at amortized cost or at equity method under IFRS, the market-consistent value will not be equal to IFRS carrying value and will be determined using IFRS fair value principles. This includes hold-to-maturity bonds, real estate held for own use or for sale and mortgages.

Within the Zurich Insurance Group, the MCBS value of intra-group loans is symmetrical. It is based on IFRS carrying values and adjusted, as needed, to allow for valuation at risk-free interest rates.

E. Valuation (continued)

E.2 Market-consistent balance sheet following SST principles

Asset valuation MCBS vs Swiss local stat. in CHF millions, for the years ended December 31

	2019 (SST)	2020 (SST)	Difference to 2019 (SST)	2020 (Swiss local stat.)	Difference SST to Swiss local stat.
Market-consistent value of investments					
Real estate	3,245	3,178	(67)	1,952	1,226

Total market-consistent value of assets	27,231	27,217	(14)	23,675	3,542

E. Valuation (continued)

Assets

The MCBS value of assets remains steady at CHF 27 billion. Likewise, the value of investment assets remains steady at CHF 22 billion, and the value of non-investment assets, including assets for unit-linked business and receivables from derivatives, remains steady at CHF 5 billion. Asset allocation was also largely stable, with allocation to fixed income increasing slightly and allocation to equities reducing slightly. The value of real estate investments fell due to sales.

While assets are valued in a market-consistent manner in MCBS for SST calculations, assets are carried at amortized cost, at cost value less impairment, at the lower of cost or market value, or at nominal value less impairment under Swiss local statutory reporting. These differences in approach can lead to large differences between the asset values as determined using IFRS, Swiss local statutory reporting or MCBS. This effect is observed in the differences in values of real estate, equities, cash, mortgages, derivatives – in particular swaptions – and fixed income securities. The aggregate value of investment and respective hedging assets is CHF 4.0 billion greater for SST than for Swiss local statutory reporting at year-end 2020.

Reinsurers' share of best estimate provisions for insurance liabilities (reinsurance assets) is considerably higher for Swiss local statutory reporting. This is primarily due to allowance for future net reinsurance payments in SST but not from a Swiss local statutory reporting perspective: on a market-consistent basis, projected best estimate cash flows in favor of the reinsurer largely offset projected recoveries from the reinsurer. There are further minor classification and valuation differences between the SST and the Swiss local statutory reporting valuation approach for non-investment assets. Overall, the differences in the remaining non-investment assets result in a CHF 0.4 billion lower SST valuation for year-end 2020 than for Swiss local statutory reporting, almost all of which relates to reinsurance assets.

Overall, the value of assets remains CHF 3.5 billion greater on the market-consistent SST basis than on the amortized cost value basis used for Swiss local statutory reporting.

Insurance liabilities

For SST, liability cash flows are projected based on best-estimate demographic and policyholder behavior assumptions. These assumptions are generally company specific, in particular for expenses, and when used to scale industry tables for demographic assumptions to match ZLIC's experience data. These assumptions are derived from experience analyses of historic values and industry data. Specific assumptions are described as follows:

- Demographics: Mortality, longevity, morbidity incidence and morbidity recovery assumptions are based on experience data analysis including Swiss and other industry statistics.
- Policyholder behavior: Policyholder behavior assumptions include surrenders, lapses and option take-up and are based on ZLIC's own experience.
- Further company-specific assumptions: Expenses are calculated using the CFO Forum Principles of experience analysis as a basis. No future improvements from efficiencies are considered in the calculation, and one-off expenses are also excluded.
- Management actions, such as strategic asset allocation and policyholder participation principles, are modeled consistently in line with agreed practices.

E. Valuation (continued)

The run-off view prescribed by the FINMA standard model is used. This excludes discretionary benefits and for Swiss Corporate Life & Pensions business excludes future premiums after the second projection year.

For SST, economic assumptions are used as provided by FINMA and are determined such that projected cash flows are valued in line with the prices of similar cash flows that are traded on capital markets. Risk-free valuation yields are calibrated to levels matching mid-market quoted government bond prices. Market-consistent liabilities are calculated prior to shareholder tax.

Market-consistent liabilities are best estimates. They differ from the local statutory liabilities, which correspond to liabilities valued according to more prudent assumptions as required by the Swiss Code of Obligations.

Life insurance liabilities gross of reinsurance are part of the MCBS and apart from a few de minimis items are all directly written. Overall, ZLIC makes limited use of reinsurance as a proportion of overall liabilities; corresponding reinsurance assets are shown on the asset side of the MCBS on the previous page.

The market value of insurance liabilities remained steady at CHF 17 billion, of which CHF 1 billion is unit-linked. Based on the cash flow projection underlying the Q4 2019 SST calculation, a CHF 0.5 billion reduction to the value of insurance liabilities is expected. The present value of the liabilities is further decreased by CHF 0.3 billion in future profits in relation to new business both in Japan, contributing CHF 0.2 billion, and Switzerland. This was largely offset by a CHF 0.5 billion increase in liabilities due to lower discounting as interest rates fell, among other smaller items. The unit-linked liabilities remained steady.

In contrast to the market-consistent view, valuation for Swiss local statutory reporting embeds a degree of prudence in demographic assumptions, and zeroizes future profits. The valuation interest rate for Swiss local statutory reporting reserving is also set cautiously but is nevertheless reflective of the actual yield on the investment portfolio, which is higher than the current FINMA yield curve used for SST valuation. Nevertheless, the overall Swiss local statutory reporting reserving basis is more conservative than the best-estimate approach used for SST, and as such the overall value of best-estimate insurance liabilities is CHF 2.7 billion lower for SST than for Swiss local statutory reporting as of December 31, 2020, up from CHF 2.5 billion at December 31, 2019, with the increase driven mostly by strengthening statutory equalization reserves in Switzerland by CHF 0.2 billion.

Other liabilities

These liabilities include various positions valued at market value. They range from cash pooling liabilities and subordinated debt, to collateral payables from hedging activities, and tax provisions. For SST the total other liabilities remained steady at CHF 3 billion. The CHF 0.1 billion growth was driven primarily by growth in liabilities for reinsurance of the business in Japan. Overall other liabilities for SST are CHF 0.1 billion higher than other liabilities for Swiss local statutory reporting, primarily because of SST provisions for deferred real estate taxes, partially offset by non-technical statutory provisions not relevant for best estimate SST valuation.

F. Capital management

ZLIC's capital management and planning approach is embedded in the overall capital management policy of Zurich Insurance Group. The approach is designed to maximize long-term shareholder value through an optimal capital allocation, while managing the balance sheet in accordance with regulatory and solvency requirements, including managing and monitoring of local statutory capital adequacy of ZLIC operations in Switzerland, as well as in its foreign branches.

As a legal entity, ZLIC is obliged to take into account its regulatory solvency position as part of its business plans. This includes taking into account planned dividends and cash remittances, including possible risks to pay these in future.

The capital planning horizon is set in line with the overall planning cycle.

In addition to the capital and liquidity held within ZLIC, Zurich holds substantial amounts of capital and liquidity centrally at Group level. This centrally held capital can be deployed into subsidiaries if needed, providing resilience to absorb potential losses caused by very large risk events. The solvency and financial condition of ZLIC must therefore be understood in the context of the resilience and stability of the Group.

ZLIC must monitor that it remains within the solvency and capital requirement targets set in accordance to ZLIC's Risk Appetite Statement as described in this report and ensure adherence to local laws and regulations. In particular, ZLIC must ensure compliance with regulatory capital reporting standards such as correct classification and reporting of own fund items.

ZLIC is subject to the SST and tied asset regulations, and Swiss law on solvency more generally. Statutory shareholder equity, SST and tied assets are thus all taken into account when planning capital or cash repatriations to the Group.

Internal target ratios and/or thresholds, as defined in ZLIC's Risk Appetite Statement, are considered when assessing and defining the potential to repatriate capital or cash to Group.

Tied asset requirements are calculated and tracked according to FINMA guidelines and their development is analyzed on at least a monthly basis. From a risk appetite perspective, ZLIC's Board will be informed in the event that any transaction or business plan could cause ZLIC's tied asset ratio to fall below defined levels.

The following table shows the composition of shareholder's equity as of December 31, 2020 and 2019 respectively (according to Swiss local statutory reporting), and before appropriation of available earnings. The CHF 0.1 billion decrease in equity capital in 2020 was driven by the excess of the CHF 0.3 billion dividend paid over the CHF 0.1 billion net income after taxes.

Shareholder's equity	in CHF millions, as of December 31			
	2019	2020	Change	
Share capital	60	60	–	
Legal reserve	41	41	–	
General free reserve	878	878	–	
Retained earnings:			–	
<i>Beginning of year</i>	385	556	171	
<i>Gain of merger</i>	228	–	(228)	
<i>Dividend paid</i>	(320)	(263)	57	
<i>Net income after taxes</i>	263	126	(137)	
Retained earnings, end of year	556	420	(137)	
Total shareholder's equity	1,535	1,399	(137)	

The Swiss local statutory shareholders' equity is CHF 6.5 billion lower than SST risk-bearing capital. As explained in further detail in the previous section, this difference is primarily due to the CHF 3.5 billion difference in asset valuation, together with CHF 0.5 billion eligible subordinated debt not treated as a liability under SST, and CHF 2.6 billion lower liabilities under SST, partially offset by the 0.2 billion proposed cash dividend reducing SST risk-bearing capital but not local statutory shareholder's equity.

G. Solvency

ZLIC assesses its solvency under the SST. In performing the SST, ZLIC assesses its solvency and financial condition, expressed as the SST ratio. The SST ratio must be calculated as per January 1 and must be submitted to FINMA. For business focused on Switzerland, FINMA typically requires the SST standard model to be used, and in line with this ZLIC uses the SST standard model for SST.

ZLIC is part of the Zurich Insurance Group which maintains a strong capital position. As of December 31, 2020, the IFSR of ZIC was 'AA-/Positive' by Standard & Poor's¹, 'Aa3/Stable' by Moody's and 'A+(Superior)/Stable' by A.M. Best. Furthermore, Zurich Insurance Group's unaudited estimated SST ratio was 182 percent as of January 1, 2021.

Breakdown of target capital into essential components

ZLIC's implementation of the SST standard model follows the design principles and requirements described by FINMA. In particular, the risks considered are market, insurance and credit risks. For ZLIC, the risks that are most material are the following:

- Market risk (ALM) covers the potential adverse change in net asset values due to movements in markets that affect, for example, interest rates, credit spreads, equity prices, real estate and foreign exchange rates, as well as respective volatilities.
- Life insurance risks comprise the risks of an adverse movement of in-force business due to developments in biometric experience relative to current expectations or resulting from unanticipated adverse changes in maintenance expenses or persistency experience.
- Credit risks comprise the risk of a decrease in the value of assets due to changes (migrations) in the credit quality of counterparties and eventual default. The SST standard model allows for both third-party investment credit risk, in which exposure consists mainly of bonds, mortgage-backed securities, mortgages, loans and cash, and other credit risks. Other credit risks include reinsurance credit risk in which the exposure consists of net reinsurance receivables, receivables credit risk, and intragroup credit risk.
- ZLIC's business focuses primarily on life insurance, leaving only negligible property and casualty premiums, reserving and natural catastrophe risks.

As of December 31, 2020 and 2019 respectively, the break-down in target capital was as follows:

Solvency	in CHF millions, for the years ended December 31	2019	2020	Change
Derivation of risk-bearing capital				
Assets		27,231	27,217	(14)
Liabilities		(19,873)	(19,681)	192
Market-consistent value of assets minus total from BEL plus market-consistent value of other liabilities		7,357	7,535	178
Deductions (proposed dividends)		(263)	(170)	93
Core capital		7,094	7,365	271
Supplementary capital (eligible subordinated debt)		541	542	0
Risk-bearing capital		7,635	7,907	271
Derivation of target capital				
Insurance risk		1,682	1,608	(75)
Market risk		1,856	1,881	24
Credit risk		618	658	40
Diversification effects		(873)	(1,042)	(169)
Risk margin and other effects on target capital		1,241	1,174	(67)
Target capital		4,524	4,278	(246)
SST ratio				
(Risk-bearing capital – MVM)/(target capital – MVM) (in %)		200%	223%	23%

¹ S&P upgraded the Group rating on March 15, 2021, to AA / Stable.

G. Solvency (continued)

The values shown here already reflect diversification within each risk type with regard to individual risk drivers. The item Risk margin and other effects on target capital consists of the market value margin, accounting for CHF 1,333 million as of December 31, 2020, down from CHF 1,409 million as of December 31, 2019, as well as run-off expenses and the reduction in target capital for the expected financial result. The SST ratio is defined in the SST Circular 2017/3 as the ratio of risk-bearing capital less risk margin to target capital less risk margin.

Comments on the SST ratio

The ZLIC SST ratio of 223 percent as of December 31, 2020 grew from 200 percent at December 31, 2019. Despite a continued low-interest rate environment, ZLIC's capitalization remains strong as measured by SST. The SST ratio was supported by strong value creation from new business, with the increase in the ratio driven by favorable effects from the new credit risk model, positive economic variance and reduction in market risks in Switzerland.

Risk-bearing capital grew while target capital shrank. The CHF 0.3 billion growth in risk-bearing capital was driven by value creation from new business and positive economic variance, while the CHF 0.2 billion reduction in target capital is largely driven by improved diversification benefits under the new credit risk model.

The data, methods, and results of the Swiss Solvency Test for ZLIC are produced in accordance with the Insurance Supervision Ordinance (ISO, art. 41 seqq.). ZLIC's SST is calculated using the SST standard model.

Breakdown of market risk into essential components

The following chart shows the market risk broken down into its essential components:

- Interest rate risk refers to the risk of a reduction in risk-bearing capital due to movements in interest rates.
- Credit spread, equity risk and real estate risks refer to the risks that decline in market prices will reduce the value of debt, equity and real estate assets, respectively. For unit-linked business, such a decline would largely be reflected in reduced liability values. For the rest of ZLIC's business, the loss in market value due to a widening of credit spreads or a fall in equity or real estate prices would not be passed on to policyholders to the same extent, reducing risk-bearing capital. Private equity and hedge funds risks are shown with equities.
- Volatility risk relates to the change in value of assets and/or liabilities in response to changes in implied volatilities.

Solvency – Market risk

in CHF millions, for the years ended December 31

	2019	Adjustments previous period	2020	Change
Market risk derivation of target capital				
Interest rate risk	900		797	(103)
Spread risk	740		848	108
Exchange rate risk	605		471	(134)
Equity risk	642		615	(27)
Real estate risk	636		657	21
Volatility risk	0.3		0.5	0.1
Diversification	(1,667)		(1,509)	158
Total of market risk target capital	1,856		1,881	24

Market risk increased slightly during 2020, primarily due to increased FINMA volatilities and lower yield curves. This was largely offset by the effects of allocating investments slightly more towards corporate bonds and slightly out of equities, reducing interest rate and equity risk while increasing spread risk. The lower exchange rate risk reflects the balance of foreign exchange rate hedging activity in Switzerland and the exposure of future profits earned in currencies other than Swiss francs to fluctuations in exchange rates; however, it has little impact on market risk since it is accompanied by reduced diversification benefits.

Credit risk slightly increased from CHF 0.6 billion to CHF 0.7 billion, mainly driven by increased corporate bond exposures. The introduction of the new SST standard model for credit risk had relatively little impact on standalone credit risk, with the main effects of the new model felt in the improved diversification benefits between credit risk and insurance risk.

G. Solvency (continued)

Breakdown of life insurance risk into essential components

The following table shows the life insurance risk broken down into its essential components:

- Mortality risk is the risk that liabilities increase through higher-than-expected mortality rates.
- Longevity risk is the risk that liabilities increase through lower-than-expected mortality rates for annuitants.
- Morbidity incidence risk is the risk that liabilities increase through higher-than-expected rates of morbidity inception.
- Morbidity recovery risk is the risk that liabilities increase through lower-than-expected rates of recovery.
- Lapse risk is the risk that more policyholders than expected allow their policies to lapse or surrender their policies to the disadvantage of ZLIC.
- Expense risk is the risk that the expenses of running the in-force business are higher than expected.

Solvency – Insurance risk	in CHF millions, for the years ended December 31		Adjustments	Change
	2019	previous period	2020	
Insurance risk derivation of target capital				
Life insurance liabilities				
Mortality	134		129	(5)
Longevity	395		392	(3)
Morbidity incidence	1,078		1,067	(11)
Morbidity recovery	1,986		1,922	(64)
Business risk				
Expenses	643		567	(76)
Lapses	81		110	29
Option take-up	5		4	(1)
Diversification	(2,638)		(2,583)	55
Total of insurance risk target capital	1,683		1,608	(75)

The main drivers of the decrease in insurance risk from CHF 1.7 billion to CHF 1.6 billion were the stronger Swiss franc relative to the Japanese yen, and the lower persistency assumption in Japan, which reduced risk exposures, accelerating the projected run-off of the business. Lapse risk increased with the introduction by FINMA of an increased stress in the SST standard model outside of Switzerland.

Breakdown of risk-bearing capital into essential components

The following table shows a breakdown of the risk-bearing capital based on its essential components. The risk-bearing capital calculation starts with assets less liabilities, as set out in the market-consistent balance sheet. The net assets less liabilities are then reduced by deductions for proposed dividends to give the core capital. Subordinated debt with equity features approved by FINMA as eligible for inclusion in risk-bearing capital is included in the liabilities, and so, is added to the core capital as a final step to give the risk-bearing capital.

Market-Consistent Balance Sheet	in CHF millions as of December 31		Change
	2019	2020	
Assets	27,231	27,217	(14)
Liabilities	(19,873)	(19,681)	192
Deductions (proposed dividends)	(263)	(170)	93
Core capital	7,094	7,365	271
Eligible subordinated debt	541	542	0

Disclaimer and cautionary statement

Certain statements in this document are forward-looking statements, including, but not limited to, statements that are predictions of or indicate future events, trends, plans or objectives of Zurich Life Insurance Company Ltd. Forward-looking statements include statements regarding Zurich Life Insurance Company Ltd's targeted profit, return on equity targets, expenses, pricing conditions, dividend policy and underwriting and claims results, as well as statements regarding Zurich Life Insurance Company Ltd's understanding of general economic, financial and insurance market conditions and expected developments. Undue reliance should not be placed on such statements because, by their nature, they are subject to known and unknown risks and uncertainties and can be affected by other factors that could cause actual results and plans and objectives of Zurich Life Insurance Company Ltd to differ materially from those expressed or implied in the forward-looking statements (or from past results). Factors such as (i) general economic conditions and competitive factors, particularly in key markets; (ii) the risk of a global economic downturn, in the financial services industries in particular; (iii) performance of financial markets; (iv) levels of interest rates and currency exchange rates; (v) frequency, severity and development of insured claims events; (vi) mortality and morbidity experience; (vii) policy renewal and lapse rates; (viii) increased litigation activity and regulatory actions; and (ix) changes in laws and regulations and in the policies of regulators may have a direct bearing on the results of operations of Zurich Life Insurance Ltd and on whether the targets will be achieved. Specifically in relation with the COVID-19 related statements, such statements were made on the basis of circumstances prevailing at a certain time and on the basis of specific terms and conditions (in particular applicable exclusions) of insurance policies as written and interpreted by Zurich Life Insurance Company Ltd and may be subject to regulatory, legislative, governmental and litigation-related developments affecting the extent of potential losses covered by Zurich Life insurance Company Ltd or potentially exposing Zurich Life Insurance Ltd to additional losses if terms or conditions are retroactively amended by way of legislative or regulatory action. Zurich Life Insurance Company Ltd undertakes no obligation to publicly update or revise any of these forward-looking statements, whether to reflect new information, future events or circumstances or otherwise.

It should be noted that past performance is not a guide to future performance. Please also note that interim results are not necessarily indicative of full year results.

Persons requiring advice should consult an independent adviser.

This communication does not constitute an offer or an invitation for the sale or purchase of securities in any jurisdiction.

THIS COMMUNICATION DOES NOT CONTAIN AN OFFER OF SECURITIES FOR SALE IN THE UNITED STATES; SECURITIES MAY NOT BE OFFERED OR SOLD IN THE UNITED STATES ABSENT REGISTRATION OR EXEMPTION FROM REGISTRATION, AND ANY PUBLIC OFFERING OF SECURITIES TO BE MADE IN THE UNITED STATES WILL BE MADE BY MEANS OF A PROSPECTUS THAT MAY BE OBTAINED FROM THE ISSUER AND THAT WILL CONTAIN DETAILED INFORMATION ABOUT THE COMPANY AND MANAGEMENT, AS WELL AS FINANCIAL STATEMENTS.
